

Simbrief Helper Enh 2.x

Installation (First installation only)

Just uncompress the content of the SimbriefHelperEnh_Full_Install.zip file in your Resources/plugins/FlyWithLua folder.

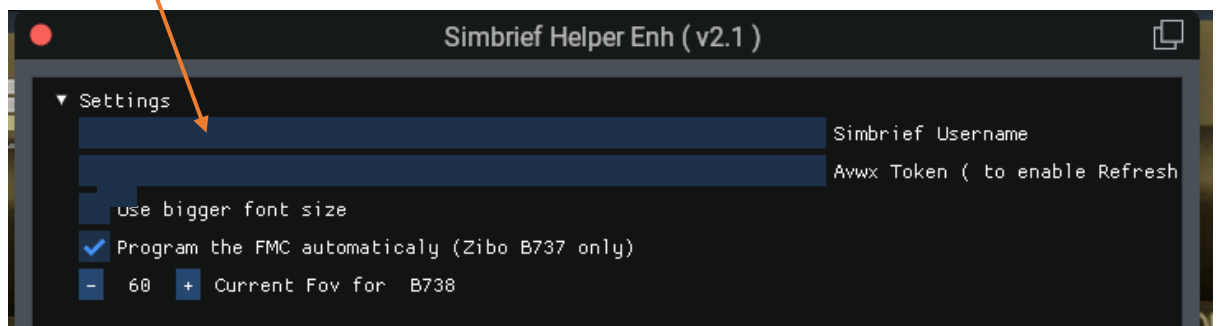

Update (if already installed, use only this method)

Just uncompress the content of the SimbriefHelperEnh_Update_only_2.x.zip file in your Resources/plugins/FlyWithLua/Scripts folder.

Settings

Simbrief

- Populate here you simbrief username

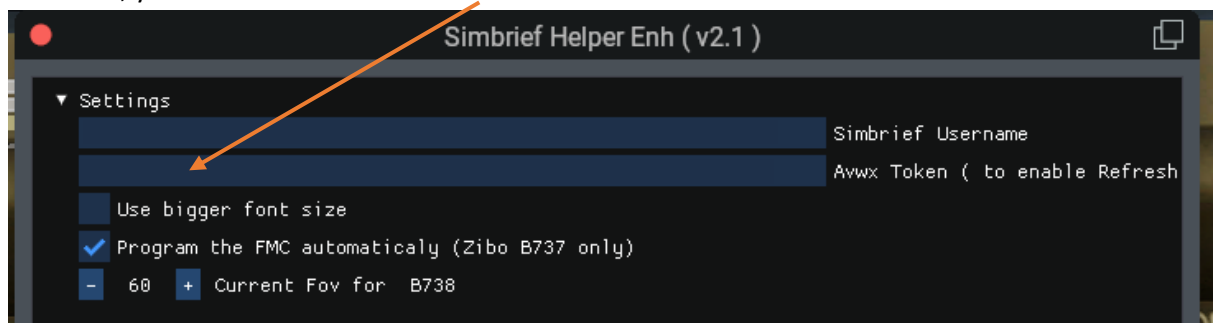

Metar

In order to get updated METAR along your flight

- go to <https://avwx.rest> and register for free
- set you own API token at the page <https://account.avwx.rest/tokens>
- in the simbrief_helper.ini file located in the FlyWithLua scripts folder populated or add this line:

`avwxtoken=YOUR_AVWX_TOKEN`

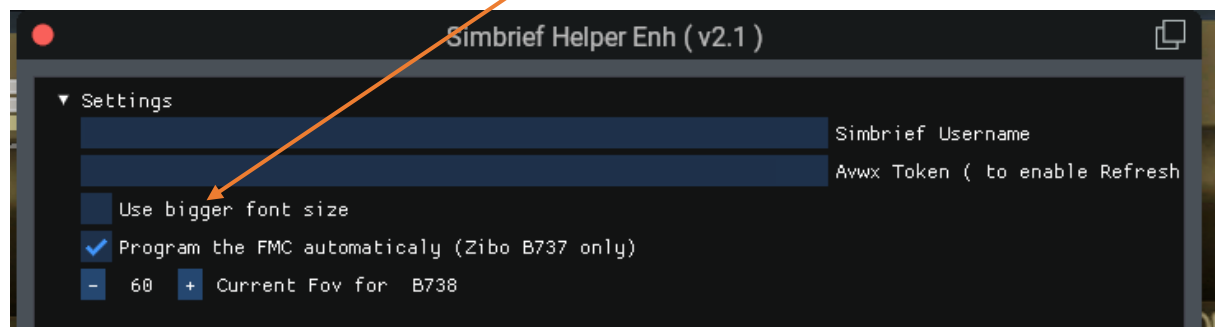

- In X-Plane do Plgins/FlyWithLua/Reload All Lua script files
- If well set, your token will be visible here:

Nb : As the token can be a long string and it is not possible to paste it in the Simbrief Helper Enh window, the only easy way is to edit the .ini file

Program the FMC automatically (Zibo B737 only)

Once the OFP is retrieved and if this checkbox is ticked, *Simbrief Helper Enh* will program the FMC automatically

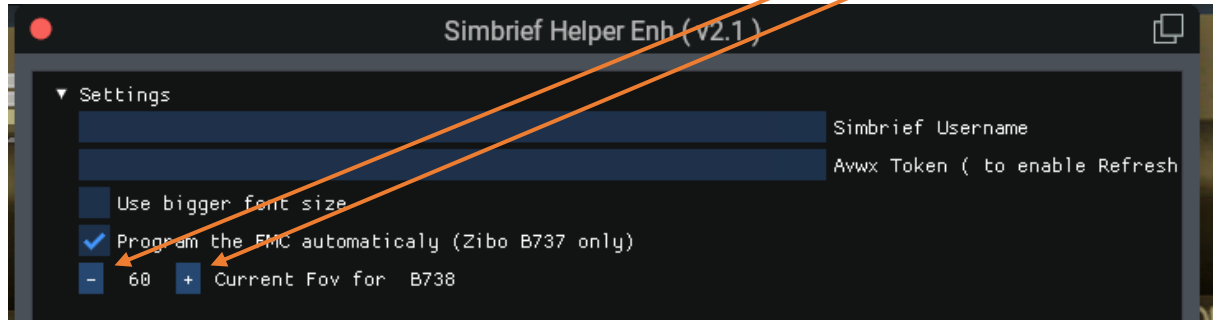

Field of View angle Keeper

The Field of View angle (FoV) is a global setting of X-plane. This value may needed to be different for each aircraft.

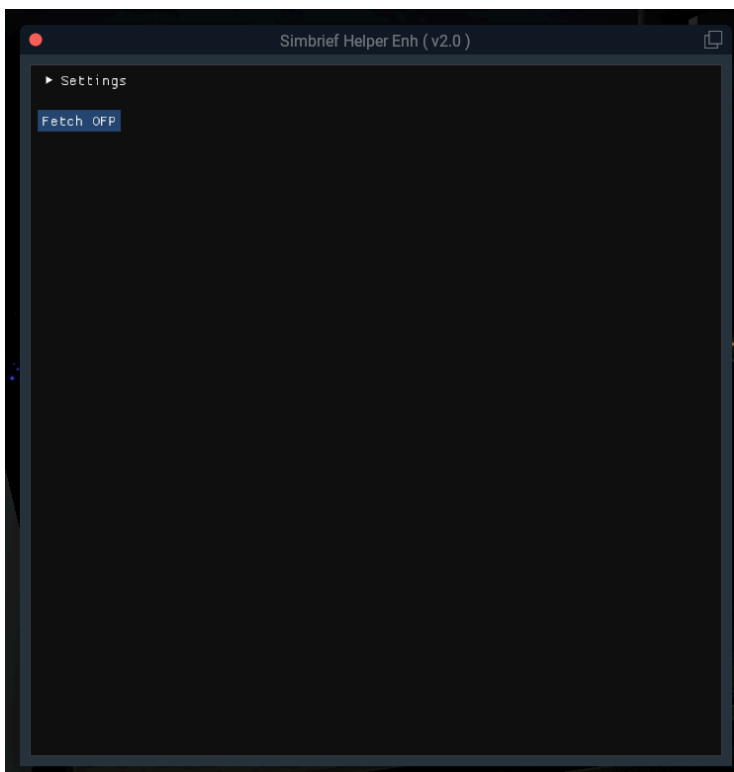

Simbrief Helper Enh stores your own setting for each plane and recall it automatically at each new flight

The current FoV can be changed (and automatically saved) by clicking the  and  buttons

Usage

Fetch your last simbrief OFP : click on the  button

Along your flight, you can update the METAR (if the avwxtoken is defined):
click on the **Refresh Metar** button

The screenshot shows the 'Simbrief Helper Enh (v2.0)' application window. At the top, there are two buttons: 'Fetch OFP' and 'Refresh Metar'. Below them, a 'Success' message is displayed. A warning message in red text states: 'Warning, this OFP is older than 2 hours'. The main content area displays flight details in a structured format:

FMS CO ROUTE: LLBGLFPG01 / TLVCDG01 (OFP Layout: QFA, (LIDO layout is prefe
